

How certainty is expressed in blaming and defending dissent

Full observed period · Low- versus high-agreement posts · Equal weight per contributing post

Certainty proportions are calculated within posts, then averaged. n = posts (blaming / defending).

Low agreement: 0.40 ≤ final YA share ≤ 0.60 (ties excluded). High agreement: ≤ 0.20 or ≥ 0.80.

Intervals: 10,000 whole-post bootstrap replicates. † AITAH high-agreement defending has only 15 posts.

B Certainty-4 difference

Blaming – defending · 95% CI
